

Ultraviolet (UV) Light Disinfection System

It's a priceless feeling -- knowing the water your family drinks is free from bacteria and viruses that can make them sick.

Getting this peace of mind is affordable when you choose an ultraviolet (UV) light disinfection system from Contoocook Artesian Well Co.

Ultraviolet purifying was introduced in 1919. Today's UV technology is environmentally safe, chemical free, and energy efficient.

Compact and easy to access, the UV system is mounted to a wall in the basement next to the water tank. A sediment filter protects the UV system from particles. Water passes through the ultraviolet light chamber. It's then ready for use in the home.

What Does Ultraviolet Light Remove?

Pathogens are bacteria or viruses that can cause disease. Ultraviolet light kills the ability of pathogens and other micro-organisms to reproduce. They become inactive and can no longer endanger your health. A UV light disinfection system kills pathogens but doesn't change the taste, color, or odor of water.

The Trojan UVMax™ is highly effective, energy efficient, and maintenance free.

Low maintenance, all natural

The UV method is all natural. No chemicals are used to purify the water. Maintenance is low; every three months, the sediment pre-filter should be changed. Annually, a service technician will schedule a visit to change the bulb and ensure the system is running optimally.

We stand behind our product

To give you the confidence that your water problem is solved, your water is tested after the installation. You are provided with the lab results. Our system comes with a two-year parts and labor warranty. We proudly stand behind our work, and we are on call every day of the week when a service is needed.

What our customers are saying...

"Thanks for your professional and courteous service. We look forward to dealing with your company in the coming years."
