

# Taste & Odor Filtration System

The odor of rotten eggs quickly takes the pleasure from drinking a cool glass of water or enjoying a hot shower. This foul odor comes from hydrogen sulfide, which is a gas dissolved in your water.

If you're ready for water that's fresh and clean, it's time for an all natural, maintenance-free filtration system from Contoocook Artesian Well. Once installed, the Taste & Odor system removes unpleasant tastes and odors from your water immediately. There are no filters or cartridges for the homeowner to change. Simply, you will love turning on your faucet.

Not only does the Taste & Odor system remove sulfur gas; it also removes low levels of manganese and iron that can stain toilets and sinks. This system is also an excellent solution for minor sediment and pH imbalances.

## HOW OUR SYSTEM COMPARES

Some filter systems cause the water pressure in the home to drop. These systems restrict the flow of water to five gallons a minute, which means the homeowner, may not be able to shower while running the dishwasher, for example. Our system is designed to put no limitations on water pressure or use.

Some filtration companies install a "one size fits all" system that may not address the challenges specific to your water. Our filtration professionals custom-build each and every system to ensure a perfect fit.

## WE STAND BY OUR PRODUCT

You will immediately taste and smell the difference in your water. To give you added confidence that the problem is solved, your water is tested and you are given the lab results.

Our system comes with a two-year parts and labor warranty. We recommend an annual service check to ensure the system is working at peak performance. We proudly stand behind our work, and we are on call every day of the week when service is needed.

Did you diagnose your problem? We hope so! If you need further assistance, please call Contoocook Artesian Well at (603) 428-6060 for service 7 days a week.
